
Even light objects can cause painful injuries ...

... if they have sharp corners or edges!

(Time to be careful!)

Falling into bed - Literally!

SAMPLE

It's amazing where you find trip hazards!

All Images and Content © NSL 2008

Falling objects come in all shapes and sizes ...

... and don't have to be heavy or sharp ...

... to cause you grief!

SAMPLE

Going home, feeling glad ...

... drops his bag on another lad ...

... left behind on the heli-pad!

SAMPLE

All Images and Content © NSL 2008

To help avoid falls, wear the right gear ...

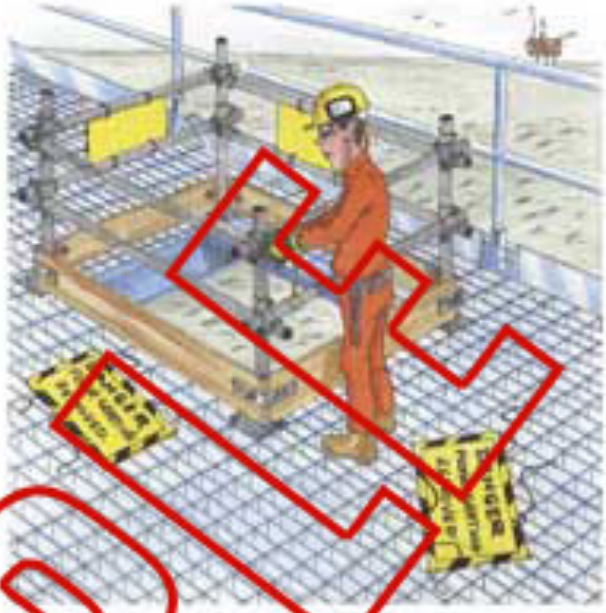
... use the correct safety equipment ...

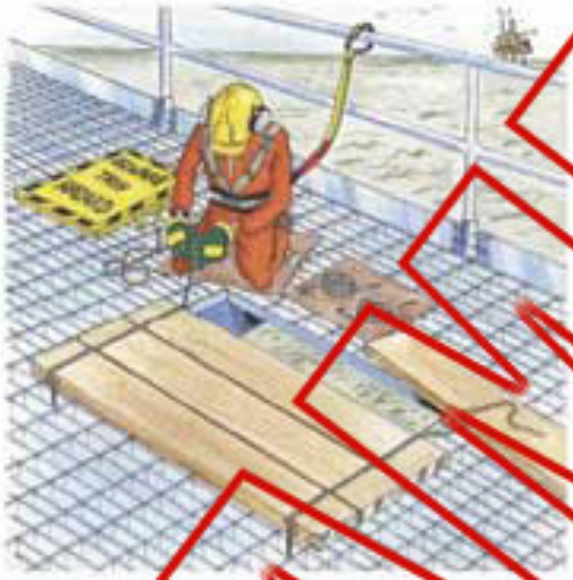
... and make sure you know the regulations.

SAMPLE

All images and Content © NSL 2008

Temporary holes must be guarded properly ...





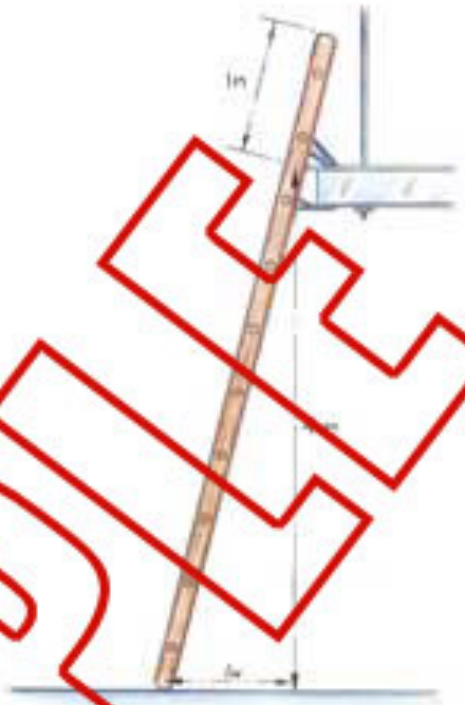
... or covered securely, but make sure in doing so ...

... you don't create another hazard!

SAMPLE

All Images and Content © NSL 2008

Always have your ladder at the correct angle ...

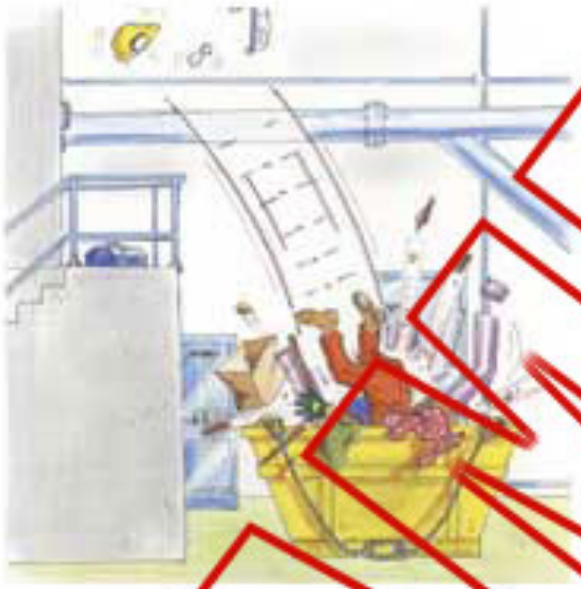


... and remember to check its condition before you use it!

SAMPLE

All Images and Content © NSL 2008

Never climb on handrails for extra reach ...



... or you could end up down in the dumps ...

... always use the correct equipment and safety gear!

SAMPLE

All Images and Content © NSL 2008

Never use a "makeshift" work platform because ...

... when it stops travelling ...

... you probably won't!

SAMPLE

All Images and Content © NSL 2008

Carrying tools in pockets may seem a good idea ...

... but it isn't if you have to climb to the worksite ...

... always use a proper tool belt!

SAMPLE

All Images and Content © NSL 2008

Never leave unsecured tools aloft ...

SAMPLE

... as wind or vibration can cause them to fall!

All Images and Content © NSL 2008

Beware when working with small components on open gratings ...

... take measures to prevent them falling through!

SAMPLE

SAMPLE

(Always inspect them prior to use)

All Images and Content © NSL 2008

Stacking goods too high ...

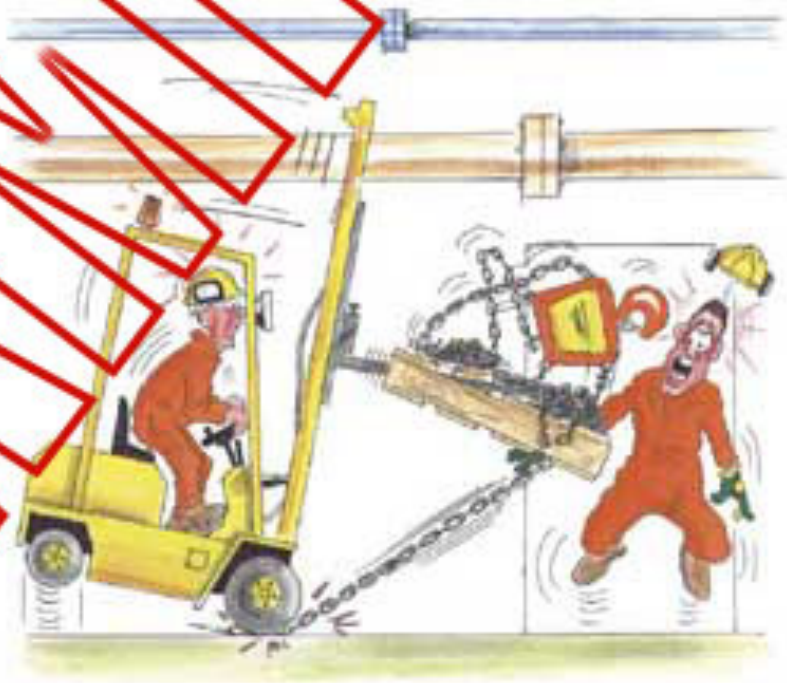
... can cause them to collapse!

(Height restrictions are set for your safety ... ... you must adhere to them)

SAMPLE

All Images and Content © NSL 2008

Taking time to palletise your goods correctly ...



... could prevent an accident!

SAMPLE

All Images and Content © NSL 2008

Beware of high winds including down draughts from helicopters ...

... they can dislodge or blow about loose items!

SAMPLE

All images and Content © NSL 2008

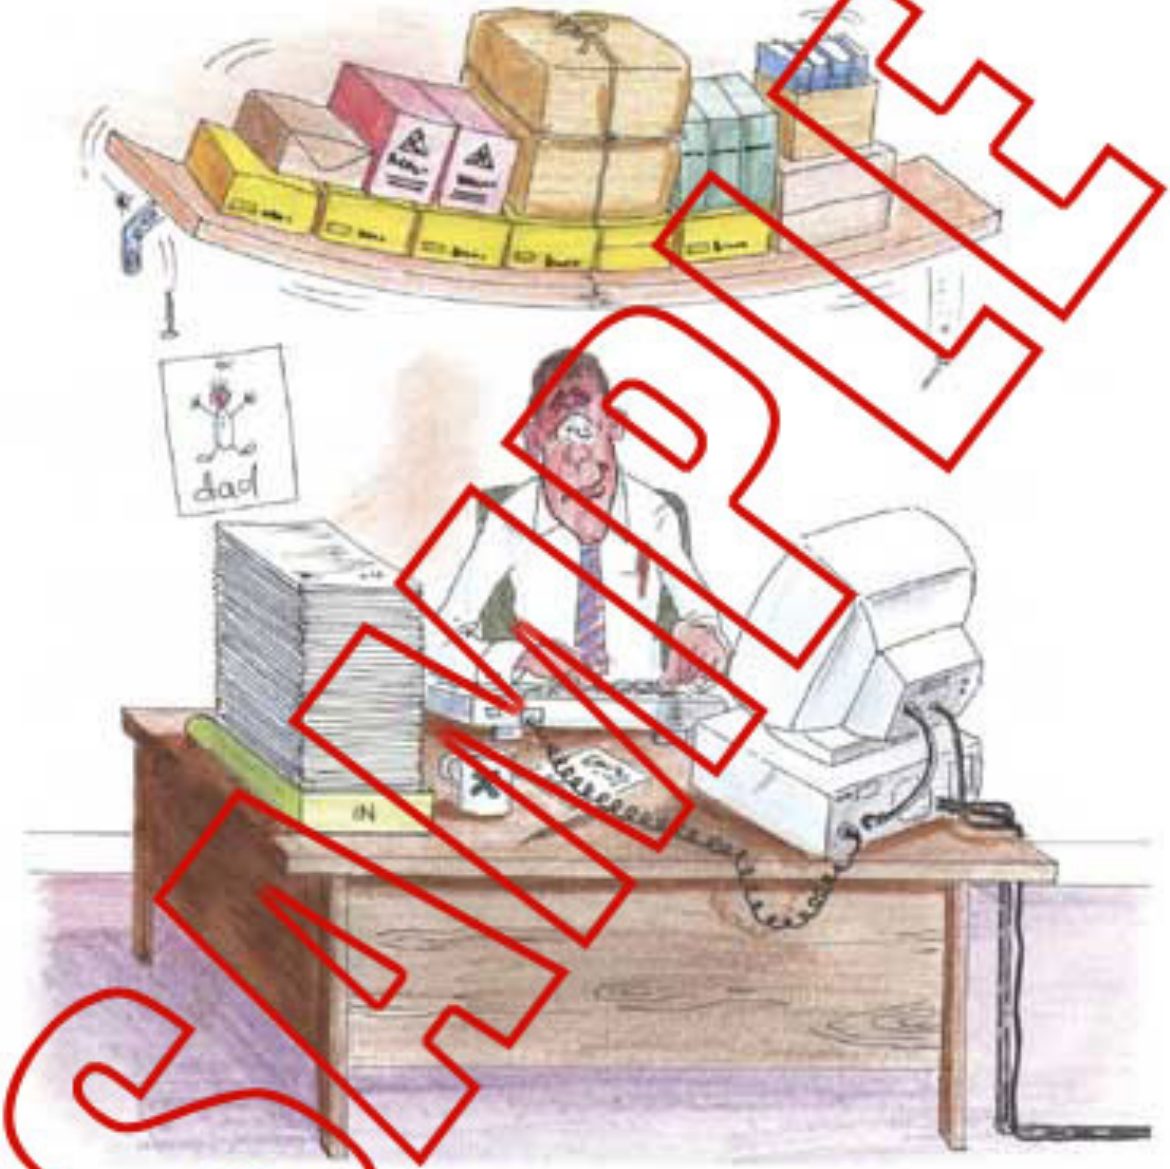
The drill floor can be a hazardous place with so much gear hanging aloft.

SAMPLE

Always be alert to the dangers of falling objects!

All Images and Content © NSL 2009

Just because you work in an office ...



SAMPLE

... don't think you can't become a victim of falling objects!

All Images and Content © NSL 2008

Never leave filing cabinet drawers open ...

... or someone could end up having a trip they never planned on!

SAMPLE

All images and Content © NSL 2008

Filing cabinets are stable if used correctly ...

... but if you overload them ...

... they can and will topple over!

SAMPLE

All Images and Content © NSL 2008

Never use a chair to reach a high shelf ...

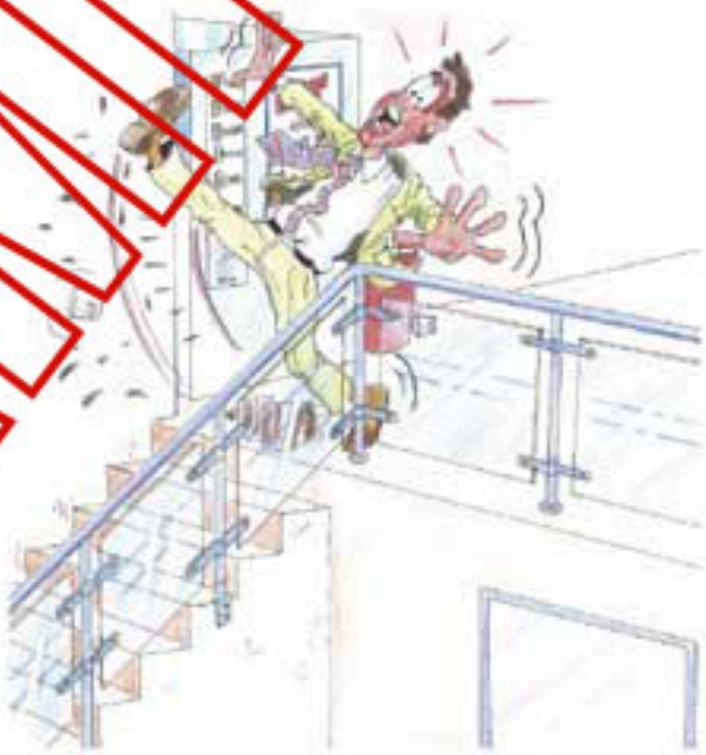
... you'll probably fall and hurt yourself!

Use proper steps and protect your health.

SAMPLE

All Images and Content © NSL 2008

Mop up your spills right away ...



... or they'll probably spoil someone else's day!

SAMPLE

All images and Content © NSL 2008

Always obey warning signs and roped off areas ...

... and never purposely walk under a suspended load!

(The consequences could be devastating!)
